BASED IN

Belgrade, Serbia (UTC+1/+2)

Available immediately — remote,
within one hour of SAST year-round.

SKILLS

FRONTEND

React, TypeScript, JavaScript (ES6+), HTML5, CSS3, SCSS/Sass, Tailwind, Vite, Webpack

MOTION

GSAP, scroll-driven animation, micro-interactions, design-to-code implementation

AI TOOLING

Daily agent-assisted development (Claude Code, Gemini CLI), Docker-sandboxed agent workflows, local LLM experimentation

BACKEND & DATA

PHP, Laravel, MySQL and relational modelling, REST API design, integration and debugging

INFRASTRUCTURE

Docker, DDEV, Linux/Unix command line, deployment and environment management, server maintenance, Git

PLATFORMS

WordPress (custom themes, Gutenberg), headless CMS, static-site architecture

CURRENTLY LEARNING

AWS and CloudFront, Shopify

LANGUAGES

English — fluent

Serbian — native

EDUCATION

Comtrade ITS — Information Technology School
Belgrade, Serbia · three-year undergraduate degree

Igor Bjelica

Frontend Engineer · Product, Motion & Studio Delivery

PROFILE

Developer with **7+ years** across studio and product work. I owned CAKE.com end to end — architecture, stack selection, the GSAP motion layer, through to launch — and have run my own web studio for eight years alongside it, which means deployment, hosting, client scoping and delivery timelines have always been mine rather than someone else's job. I build with coding agents daily and have formed real opinions about where they help and where they quietly cost time. Comfortable making technical decisions, reviewing other people's code, and being the person who ships.

EXPERIENCE

Frontend Engineer **CAKE.com**

02/2023 – PRESENT

- **Owned CAKE.com end to end** — technical design, stack selection (11ty, Nunjucks, Vite, Tailwind, GSAP), implementation and release.
- Built the site's **GSAP** animation and interaction layer, turning creative direction into production motion that holds up across devices.
- Increased page performance scores by roughly **20%** by modernizing a legacy build incrementally rather than rewriting against a live site.
- Ran **Docker**-based environments and patched Dockerfiles to move production servers off vulnerable Node versions.
- Defined standards and reusable patterns adopted across company web properties; mentored developers and reviewed their work.

Founder & Developer **Firefly Web Studio**

03/2018 – PRESENT

- **Ran a web studio for eight years** — discovery, technical design, build, launch and maintenance across concurrent client engagements.
- Built **React** frontends and custom WordPress themes on PHP and MySQL, integrating third-party APIs against real business requirements.
- **Owned hosting, deployment and environments** for live client sites, including urgent production issues outside working hours.
- Scoped, priced and delivered projects directly with clients, with no account layer in between.

Tier 3 Technical Support Engineer **Code Interactive**

10/2018 – 01/2023

- Debugged and fixed **other people's code** daily across a large portfolio of commercial products, in PHP, MySQL, JavaScript and CSS.
- Handled escalated tier 3 cases — the ones other engineers could not reproduce or resolve.

Frontend Web Developer **ET Energie & Handel**

11/2017 – 01/2018

- Maintained Linux servers and infrastructure as the sole IT employee, working daily from the command line.

Freelance Web Developer

06/2016 – 01/2017

- Delivered responsive websites for early clients including Avers Accounting & Consulting and Studio Mina.
